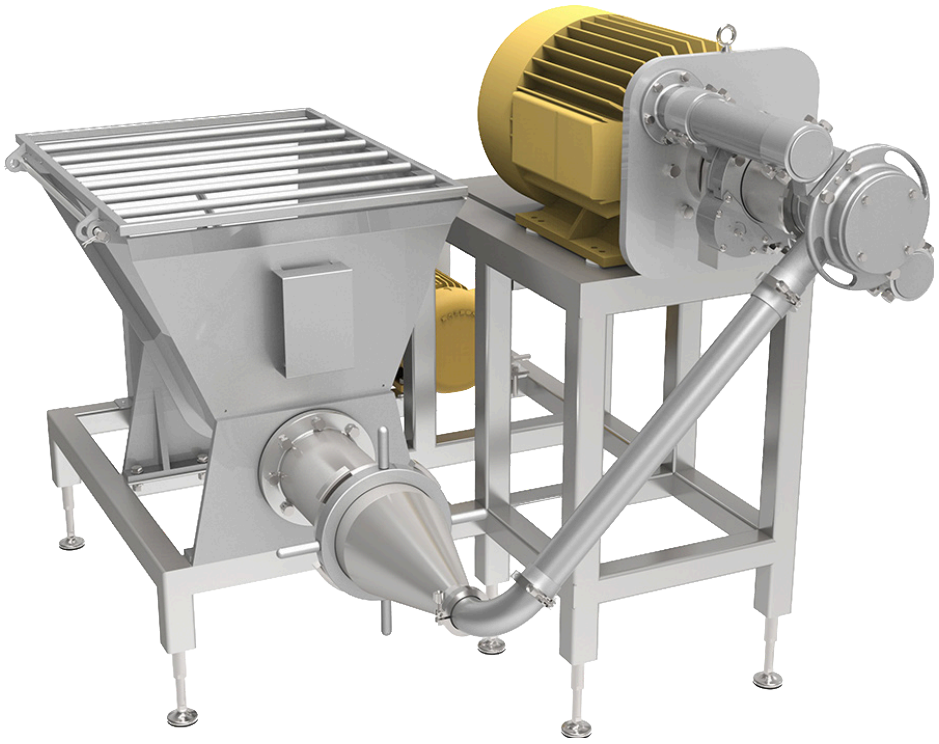
PRINCE INDUSTRIES

2000C | Combination Deboner



The Model 6 Grinder is Prince's first product designed to handle both, bone in and boneless operations. For food processors seeking to increase profit and eliminate waste, this grinder further processes product scraps that might have gone toward lower-margin uses into a higher profit-generating ground meat product.

The precisely crafted unit features a small 3x5 feet footprint and takes just five minutes to set up. While conceived as a stand-alone unit, those looking to add to existing equipment can attach the grinder to Prince's existing combination deboners.

The Model 6 Grinder is easy to maintain and clean and can process both ground chicken and turkey.

Capacity per Hour:	4,000 – 10,000 lbs. / 1,800 – 4,500 kgs.
Floor Space:	64" x 100" / 163cm x 254cm
Horsepower:	75 (Deboner) / 20 (Grinder)
